

Ideas for Milestone 2

General Page Structure:

Header

Main Menu that sticks to the top.
lets you switch between "pages"

Dropdown Menu for Users.
Has 2 options: "Login" & "Registration"

Main Content

This component contains the actual "content components".
All remaining components will be loaded into or removed from this component. Other than that it doesn't have any content on its own. It just seems simpler to have a component like this where we can switch between the different parts.

Footer

It might be nice to have a footer component where one can put some general details (Main Menu, Contact, Address...).

Required Components:

In the 'Main Component' we likely need a component for:

- ... listing all components that are currently in the database.
 - ... showing the details for a given job posting.
 - ... new users to register.
 - ... already registered users to log in.
 - ... creating new job postings and submitting them.
 - ... displaying the details of a company (company page)
 - ... administrative activities where the admin sees all "open" user applications and job posting submissions.
-
