Job app Requests

Admin user requests

Company user requests

request	path	body	returns	description
get	/admin/unverifiedCompanies/:id/:token		companies	using user id and token as parameters. returns all unverified companies as a map.
put	/admin/verify/:companyId/:id/:token	Verify, (message)		using company id, user id and token as parameters. Sets the company with given id to verified status or not. Therefore, pass boolean «verify» as body parameter. If you pass «verified» as «false», also pass a message from the admin in «message»
get	/admin/unacceptedJobItems/:id/:token		jobItems	using user id and token as parameters. Returns all unaccepted companies as a map.
put	/admin/accept/:jobitemId/:id/:token	Accept, (message)		Using jobItemId, user id and token as parameters. Sets jobitem with given id to accepted status or not. Therefore, pass boolean «accept» as body parameter. If you pass «accept» as «false», also pass a message from the admin in «message»
put	/admin/changeName/:id/:token	name		Using user id and token as parameters. Lets the admin changes his name in a body parameter.
get	/jobitem		accepted jobitems	Returns all accepted jobItems as map.
post	/jobitem /:id/:token	jobItem columns	jobItem	Creates a jobItem. Can be passed all jobItem columns as body parameters, except for «accepted» (by default null) and «messageFromAdmin» and «companyid». Returns the newly created jobItem. Needs user id and token as parameters to do so.
get	/jobitem/:id		jobItem	Using id that is passed as parameter, returns the desired jobItem.
put	/jobitem/:jobItemId/:id/:token	jobItem columns	jobItem	Updates jobItem with id that is passed as parameter. Can be passed all jobItem columns as body parameters except for «accepted», «messageFromAdmin» and «companyid». Needs user id and token as parameters to do so.
delete	/jobitem/:jobItemId/:id/:token			Using jobItemId that is passed as parameter, deletes the desired jobItem. Also needs user id and token as parameters to do so.

post	/user/token	email, password	id, token, isAdmin	Generates first token at login. Therefore needs password and email as body parameters. Returns token, user id and boolean isAdmin.
post	/company	User columns, company columns	id	Crates user and company. Can be passed user columns email and password and all company columns as body parameters, except for «verified» and «userId».
get	/company/:id		company	Using id that is passed as parameter, returns the desired company, but only if the company is verified.
get	/company/:id/:token		company, message	This request can only access the company itself (to get not public information as 'message'). The Company does not have to be verified.
get	/company/allVerified		verified Companies	Returns map of all verified companies.
get	/company		verified Companies	Returns an array of all verified companies. Replaces the /company/allVerified request (better REST API style)
put	/company/:id/:token	Company columns		Using company user id and token to update company details. Pass company columns as body parameters, which are then updated.
delete	/user/:id/:token			Lets company users delete their own company.
put	/user/:id/:token	Password, email		lets the user change his password and email. Needs to be passed his user id and token to do so
get	jobItem/:id/:token		Jobitems	Returns all jobitems of own company, therefore need to pass token and own id. Frontend can then sort by "accepted" (null, true, false) and display "messagefromadmin".
get	user/:id/:token		User	returns user object (only containing email and id)
get	jobitem/search/:term		jobitems	Search for anything in title, description, skills, city and street of jobitem. Returns map of according items (only if they were accepted)
get	Jobitem/filter			
get	Jobitem/ofCompany/:companyId		jobitems	Returns all accepted jobitems a company has published
get	Admin/allJobItems/:id/:token		jobItems	Returns map of all existing jobitems
get	Admin/allCompanies/:id/:token		Companies	Returns map of all existing companies
delete	Admin/deleteJobItem/:jobItemId/:id/:token			Delete the desered jobitem
delete	Admin/deleteCompany/:companyId/:id/:token			Delete the desired company user

put	Admin/featureCompany/:companyId/:id/:token	feature (true/false)		Feature the desired company
put	Admin/featureJobitem/:jobItemId/:id/:token	feature (true/false)		Feature the desired jobitem
get	Jobitem/:jobitemid/:id/:token		Jobitem (incl message, accepted)	Returns jobitem how it should be viewed by user
get	user/checkToken/:id/:token		isLoggedIn (true/false)	Returns true if the user with given id and token is a user with a valid token. Else returns false.
